

The Growing Universe!!

Scientists believe the universe is expanding. It is getting bigger.
How do they know? Let's find out:

1. Blow out a balloon to a small size.
2. Put some dots on the balloon as if marking different galaxies.
3. Now keep blowing out the balloon to a bigger size.
4. You'll see the dots (galaxies) are moving away from each other.

That is in fact what the galaxies are doing and can be observed by scientists.
